

One **lab** can sequence more DNA in 6 months than it took the **world** to sequence in 25 years.

How can the world deal with information overload?

We have a seminar to help!

Transformed! Information, Bioscience and Web 2.0
Lake Washington Rowing Club
Seattle, WA

October 7, 2008 6:00 – 9:00 PM

Modern technologies provide too much information, hampering understanding. Social structures that were created to deal with Industrial Age processes are inadequate for dealing with Information Age approaches. This three hour seminar examines the overabundance of data generated by the Biosciences, the ability of human social networks to innovate through interaction with this data and the enhancement of this ability by online tools.
